

The ultimate otology database

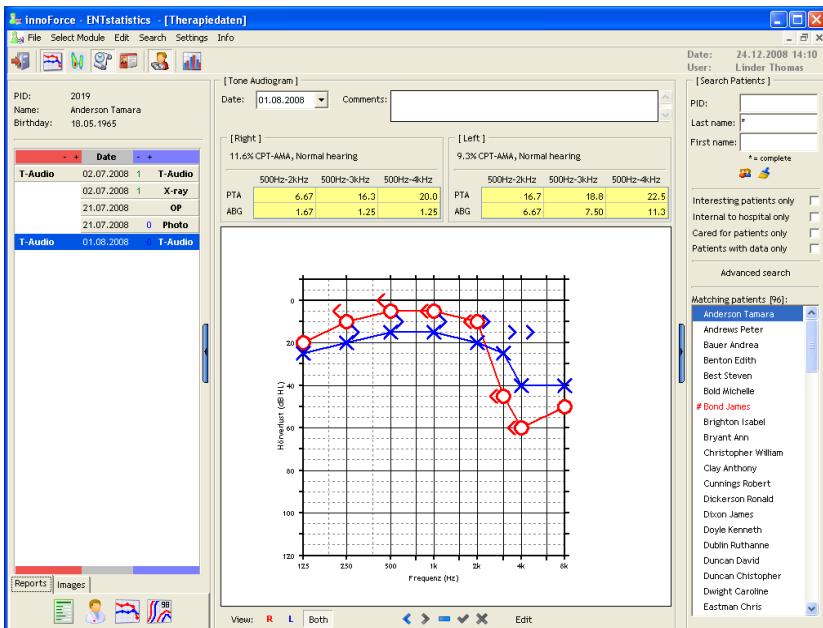

simple - powerful - straightforward

otis.
ENTstatistics

Working with renowned otologists, innoForce has developed the database program *ENTstatistics* with which ENT therapies can be recorded in a rational and systematic manner and evaluated statistically.

The program stores all surgery reports, audiograms, follow-up reports, operation sketches and X-ray images in a user-friendly database. Therapy data stored there can be interrogated according to multiple criteria, and audiograms can be compared before and after surgery. A mouse click allows important statistical characteristic values to be calculated instantaneously and presented in graphical form.

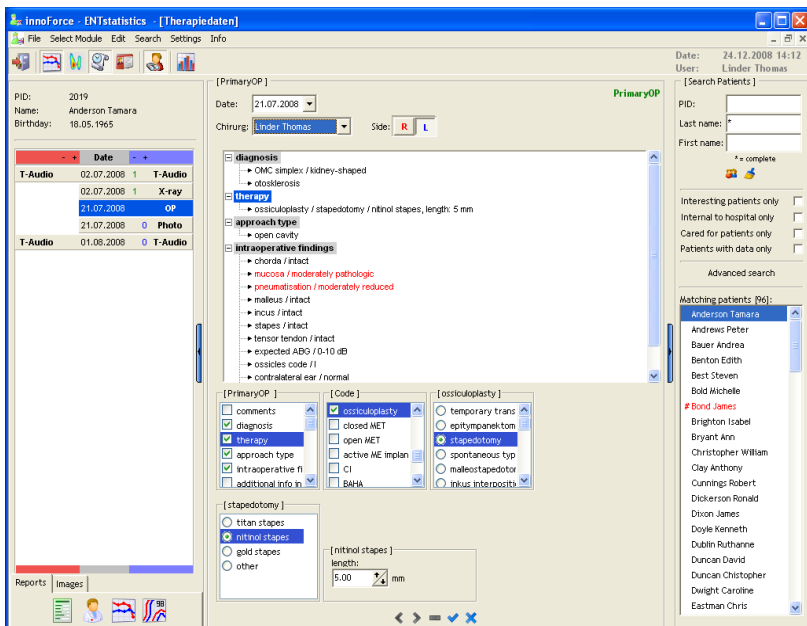

Clinical history with audiogram display

Quality enhancing features

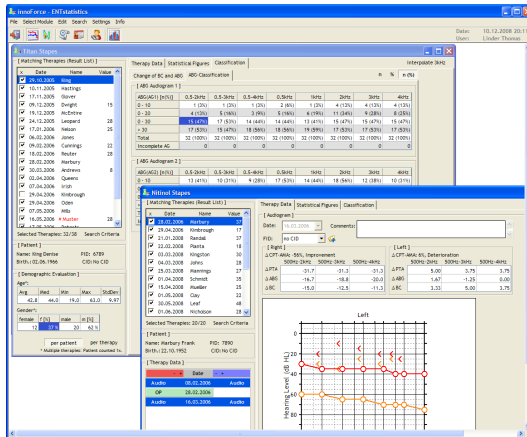

- Relevant therapy data archived in their entirety with a clear structure
- Measures identified for optimising internal processes and procedures
- Increased therapy success rate
- Reduced treatment costs
- Rapid location-independent access to data (e.g. in consulting hours)

Cost-saving features

- Easy and quick operation
- Significant time saving for evaluations
- Individual configuration of all reports with the Admin Tool
- Flexible integration into existant systems
- Based on a sophisticated system which is being continuously improved

Recording therapeutic data

Statistical evaluation

“An extremely constructive collaborative project with innoForce has resulted in a database program which not only provides complete storage of relevant audiological, surgical, imaging and graphic data but also supplies a rapid and comprehensive statistical evaluation. - A system like this is something we’ve been waiting for for a long time!”

Prof. Thomas Linder
Director of the ENT Clinic, Lucerne Canton Hospital

“From an IT point of view, the installation with Christoph Wille from innoForce was once again a pure pleasure. The software meets all our specifications without any reservations. Here, the principle that ‘size doesn’t matter’ has proved to be true once again. If this were always the case, we would save ourselves a great deal of time and trouble each time.”

David Lupp, IT Project Integration, Lucerne Canton Hospital
