

Diagnostic Manager

Questionnaire Functionality

This functionality enables patients to complete questionnaires on tablets, smartphones or at home on the web. The responses are sent automatically to the Diagnostic Manager, where they are displayed clearly. The questionnaire functionality can optimise workflows and save a significant amount of time.

The image displays two screenshots of the Diagnostic Manager software. The left screenshot shows a web browser window with the URL 'medquestionnaire.org/1717' and a 'Medical History Questionnaire' form. The question is 'Do you smoke?' with four radio button options: 'I have never smoked.', 'I smoked in the past and quit smoking during the last 12 months.', 'I smoked in the past and quit smoking more than 1 year ago.', and 'I smoke currently.' The progress bar shows 19/24 questions completed. The right screenshot shows the 'Diagnostic Manager - Therapy data' interface for a 'Demo Patient' (PID: 1000000, Date: 12.12.2015). It displays a 'Medical History Questionnaire' form with the 'clinic' logo. The form includes a question 'How long have you had your nasal symptoms for?' with a value of '2 yrs' and two Likert scales for 'Obstruction or congestion' and 'Nasal discharge', both with a value of '3 / 5' selected. The interface also shows a 'Medical Record' section with a search bar and a table of records.

Recording of an online questionnaire and presentation of the responses in the Diagnostic Manager

The functions at a glance

- Completion of questionnaires on tablets, smartphones or in an Internet browser
- Sending of questionnaire invitations by e-mail to patients
- Printing of blank questionnaires to be completed in handwriting by patients
- Fast transfer of manually entered responses with a dedicated editor
- Generation of PDF documents of questions answered

The questionnaire is sent to the Diagnostic Manager.

Tailored to your needs

The questionnaires can be setup easily using the Admin Tool of the Diagnostic Manager¹. This allows you to configure self-developed question/criteria catalogs for various areas (e.g. tinnitus, quality of life, language development, ...). As part of the optional “carefree package for questionnaire configuration”, INNOFORCE supports you and configures the questionnaires in accordance with your requirements.

¹ INNOFORCE does not sell licences for questionnaires but only the feature for configuring questionnaires and completing them. In the case of questionnaires requiring a licence, the client is responsible for possessing the necessary right to use these.

Prof. Klaus Stelter
ENT Centre Mangfall-Inn
Rosenheim, Germany

“The alert and dynamic team at INNOFORCE has really pulled off a masterstroke for ENT practices. All current device manufacturers and all questionnaires can be implemented. The patient himself completes the questionnaire using a tablet or, which is increasingly the trend, his smartphone and the questionnaire is then sent automatically to the Diagnostic Manager. This means we do not have to devote extra time to recording questionnaires. It’s simply brilliant. The Diagnostic Manager simplifies work at the practice to an extraordinary degree and now we have just one program for all ENT findings. One that is quick, clearly structured and has an attractive design.”
